

Zinger Systems & Edge Report

All trading since the \$1,000 paper clean-slate reset

zinger.kierkegaard.space ð Contabo VPS

Generated 4 September 2026, ~09:15 UTC

Abstract

Scope is **not** a process restart. This report covers every paper close and arb package after the last `paper_reset_clean_slate` that restored **\$1,000** starting cash (2026-09-03T10:43:57Z). Fifteen bot sessions followed. Bankroll is now ~**\$1,171** (+**\$171** vs reset). Closed-leg PnL sums to +**\$240.61** across **130** closes (package bank 59/59 WR).

Reset boundary

Field	Value
Event	<code>paper_reset_clean_slate</code> (archived prior book)
When	2026-09-03 10:43:57 UTC
Starting cash	\$1,000 (<code>paperInitialDeposit</code>)
Archived away	68 trades ð 34 packages (pre-reset history)
Source of truth	<code>data/zinger.db</code> → <code>poly_paper_archive.json</code>

Headline since reset

Metric	Value
Equity now (paper bankroll)	\$1,171.34
PnL vs \$1,000 bankroll	+\$171.34
Closed legs	130
Sum of closed-leg PnL	+\$240.61
Leg win rate	50.0% (65W / 65L)
Expectancy / leg	+\$1.85
Payoff (avgW / avgL)	1.48×
Notional traded (cost basis)	\$2,277
ROI on cost	10.6%
Best / worst leg	+\$60.37 / -\$49.33
Arb packages settled	59 ð 100% WR ð package net +\$44.72
Sessions observed	15

Note: Bankroll +\$171 and summed leg PnL +\$240 differ because of open marks, fees/ledger timing, and how package merges book per-leg vs package net. Use **bankroll** for capital; use **package WR** for locked-arb quality; use **leg expectancy** for flow.

Engine	Legs	PnL	WR	Cost
Directional	22	+\$148.02	50.0%	\$251
Arb (legs)	108	+\$92.59	50.0%	\$2,026

Edge by engine

Directional delivered most of the dollar upside on far less notional (TP-heavy). Arb provided volume and a perfect package scoreboard (59/59) with smaller \$/package.

Edge by asset

Asset	Legs	PnL	WR
ETH	37	+\$160.53	54.1%
BTC	61	+\$65.72	47.5%
XRP	10	+\$6.05	50.0%
SOL	16	+\$5.09	50.0%
DOGE	6	+\$3.22	50.0%

Arb packages by asset

Asset	Packages	Pkg net
BTC	28	+\$25.77
ETH	14	+\$12.51
SOL	9	+\$2.65
XRP	5	+\$2.90
DOGE	3	+\$0.89

Exit mix

By calendar day (UTC)

Sessions since reset

Session	Last obs	Trades	Sess PnL	Equity
mtlednp5	10:51	0	\$0	\$1000
mtlenyij	10:53	0	\$0	\$1002
mtletw2c	12:47	10	+\$11.79	\$1003
mtliuacy	17:01	10	+\$18.34	\$1011
mtlszr5i	22:00	2	+\$17.23	\$1020
mtm2lzcñ-mtm3no9f	—	0	—	\$1020
mtm3q5xp	23:55	8	+\$9.50	\$1023
mtm6yau7	00:04	0	\$0	\$1024
mtm7mukv	01:11	2	+\$1.40	\$1025
mtm9euqw	01:24	9	+\$10.93	\$1032
mtmmn5oh	08:20	29	+\$123.19	\$1138

Session	Last obs	Trades	Sess PnL	Equity
mtmor579	08:56	42	+\$42.05	\$1164
mtmq08un	09:15	17	+\$14.23	\$1178

Systems notes in this window

- Hybrid desk: CLOB arb + scalp directional; multi-asset BTC/ETH/SOL/XRP/DOGE; 5m/15m/4h.
- Slice sizing added mid-window (`arbSliceUsd=$15`, up to 6 packages/slug) to walk residual depth.
- Reliability: overnight crash (`ERR_HTTP_HEADERS_SENT` on RL signal); scan-lock hangs; false 4h `orphan_paper` (fixed TF-aware window seconds).
- Directional signals remain BTC/ETH-centric — altcoins show up mainly via arb packages.

Verdict

1. Since the \$1,000 reset the book is **net positive** on both bankroll (+\$171) and closed-leg sum (+\$241).
2. **Directional TPs** dominate dollar edge; **arb packages** dominate reliability (100% package WR).
3. ETH is the strongest asset; BTC provides most arb package count.
4. Next ops focus: keep scan loop alive (hung scans still kill fill rate) and keep slice multi-fill on when books are thick.
